PAPER MILL DIGESTER SCAFFOLDING

INTRODUCTION

Faster shutdown maintenance and reduces labor costs.

The digester scaffolding is a versatile system that works with the ring/all-round system scaffolding.

The special platforms and brackets are efficiently erected on the scaffold system components, covering a range of digester diameters.

PROSCAFF

Advantages

ADVANTAGES

The platforms are a combination between the regular scaffold planks and special round planks that accommodate different diameters, ranging typically from 15ft to 18ft/4.5m to 5.5m.

The platforms are configured to follow the contour of the inside wall at 1.5"/4cm distance, ensuring a well decked area and robust working platform. Other dimensions of platforms are also available.

The number of items is reduced and easy to assemble. No extra plywood or wiring is necessary.

Main Components

RING/ALL-ROUND SYSTEM SCAFFOLD

- 2m/6'6" standards
- 2.13m/7' ledgers
- 2.13m/7' planks

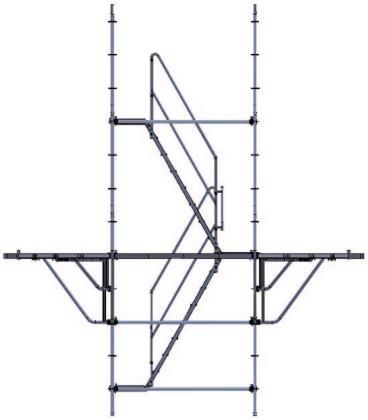

PERIMETER PLANK 2.13M/7FT

Erected along the 2.13m steel planks, follows the contour of the inside wall.

ALUMINUM STAIR

Erected inside the structure. Hooks insert directly into special intermediary planks.

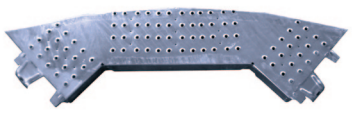

CORNER PLANK

Erected at corners, works in combination with the corner perimeter plank.

CORNER PERIMETER PLANK

Erected at the corner, the corner perimeter plank follows the contour of the inside wall.
